

# Turn back the clock on competitive electricity markets?

No. Let's keep moving forward.

**Electricity Competition Works.** How can we create a sustainable energy future? Some say we should bring back the old electricity monopolies.

We couldn't disagree more.

Thanks to properly designed competitive markets, we've got more choice and innovation for America's consumers and industries. Today, electricity competition:

**Ensures a Greener Future** by promoting clean technologies, more 'green' energy choices and lower emissions.

**Strengthens Our Economy** by using markets to spur innovation and meet growing energy demands with improved efficiency. That's good for everyone.

**Saves Money** by harnessing the power of competition. According to independent and government experts, consumers have saved billions of dollars thanks to competitive electricity markets.

America's Energy Future: The Choice is Yours.

**COMPETE** is a national coalition of over 170 electricity stakeholders - a leading voice in support of policies that promote reliable, affordable electric power through competitive electricity markets. Learn more about **COMPETE** and find out how the power of choice in electricity markets can work for everyone at [www.competecoalition.com](http://www.competecoalition.com).
